

Telegram Bot Node.js — To‘liq Kurs (File Structure + Kodlar)

1. Project Strukturası

```
project/
├── index.js
├── package.json
├── assets/
│   ├── photos/
│   │   └── photo.jpg
│   ├── videos/
│   │   └── video.mp4
│   └── docs/
│       └── file.pdf
├── config/
│   └── bot.js
└── handlers/
    ├── message.js
    ├── photo.js
    └── command.js
```

Bu strukturada barcha fayllar tartibli joylashadi va real project uchun qulay.

2. Botni ishga tushirish (index.js)

```
const TelegramBot = require('node-telegram-bot-api');
const token = 'YOUR_TOKEN';

const bot = new TelegramBot(token, { polling: true });

require('./handlers/message')(bot);
require('./handlers/photo')(bot);
require('./handlers/command')(bot);
```

3. Oddiy xabar (handlers/message.js)

```
module.exports = (bot) => {
  bot.on('message', (msg) => {
    const chatId = msg.chat.id;
    bot.sendMessage(chatId, "Salom 🤖");
  });
};
```

4. Rasm yuborish (local file)

```
bot.sendPhoto(chatId, './assets/photos/photo.jpg', {
  caption: "Local rasm"
});
```

5. Rasm yuborish (URL)

```
bot.sendPhoto(chatId, 'https://example.com/photo.jpg');
```

6. Rasm qabul qilish (user yuboradi)

```
module.exports = (bot) => {  
  bot.on('photo', (msg) => {  
    const chatId = msg.chat.id;  
    bot.sendMessage(chatId, "Rasm qabul qilindi");  
  });  
};
```

7. Video yuborish

```
bot.sendVideo(chatId, './assets/videos/video.mp4');
```

8. File yuborish

```
bot.sendDocument(chatId, './assets/docs/file.pdf');
```

9. Command (/start)

```
module.exports = (bot) => {  
  bot.onText(/\start/, (msg) => {  
    bot.sendMessage(msg.chat.id, "Bot ishga tushdi ■");  
  });  
};
```

10. Inline Button

```
bot.sendMessage(chatId, "Tanlang", {  
  reply_markup: {  
    inline_keyboard: [  
      [{ text: "Bos", callback_data: "click" }]  
    ]  
  }  
});
```

11. Callback Query

```
bot.on('callback_query', (query) => {  
  bot.sendMessage(query.message.chat.id, "Button bosildi");  
});
```

12. File_ID bilan ishlash

```
bot.on('photo', (msg) => {  
  const fileId = msg.photo[msg.photo.length - 1].file_id;  
  bot.sendPhoto(msg.chat.id, fileId);  
});
```

Xulosa

Siz bu strukturada ishlasangiz professional darajadagi Telegram botlar yasay olasiz. Media (rasm, video, file) bilan ishlash 3 xil: local, URL, file_id.
